

Problem Description

District Information System for Education (DISE) is a database of information about schools in India.

You will be given a CSV file containing information of all the schools in one of the states in India aggregated at the district level. The Ministry of Human Resource Development has tasked you with creating a powerful visualization of this data in order to justify a larger allocation in next year's budget.

Take a look at some of Edward Tufte's work for inspiration.

Along with the visualization, please attach a small writeup / usage manual for your visualization. You are free to use any resources you see fit – friends, text books, other data sources, the internet, etc. In fact, we encourage this! Please do mention these sources used, if any, in your writeup.

Evaluation Criteria

- 1 Information design
- 2 Cognitive load
- 3 Ingenuity
- 4 Code quality

Just FYI, this is some of the work we did in-house :
<http://rte.socialcops.org>

We're hoping you can take this to the next level in your state :)
